PROFILE

BCA student with foundational knowledge in cloud computing and data analytics, with hands-on exposure to Linux, Docker, and Terraform. Comfortable working with data using Excel and basic analytical techniques, including data cleaning and interpretation. Demonstrates strong logical problem-solving skills and a practical, project-based learning approach. Currently focused on strengthening cloud fundamentals while continuing to develop data-driven thinking, and seeking opportunities to apply these skills in real-world environments.

SKILLS

Technical skills

Cloud Computing - Linux, Docker, Terraform, basic networking concepts, Jenkins, Bash scripting and Git (version control and repository management).

Data analytics- fundamentals including data interpretation, basic statistics (mean, averages, trends), and Excel (formulas, sorting, filtering).

Soft Skills

Communication, adaptability, curiosity, and a consistent willingness to learn and improve.

PROJECTS

Cloud & DevOps Project Experience (Docker, Terraform, Jenkins, Linux)

Developed a cloud-oriented deployment setup by containerizing a Flask application using Docker and applying infrastructure concepts with Terraform. Explored CI/CD fundamentals through Jenkins pipeline configuration. Strengthened system-level skills in Linux, including file systems, permissions, user and process management, and implemented basic automation using Bash scripting for backups, log analysis, and reporting. Gained practical understanding of application packaging, deployment, and operational workflows in a DevOps environment.

Sales Data Analysis (Excel)

Worked with raw sales data in Excel by cleaning and organizing datasets for analysis. Applied sorting, filtering, and basic formulas to structure the data effectively

Student Performance Analysis

Analysed a dataset to identify patterns in student performance and learning outcomes. Used logical reasoning and basic statistical thinking to interpret results and draw conclusions.
